Content Explanations & Examples

Topic Overviews

- **In Brief** - narrated summaries at the basic level of medical topics. The narrator is the primary character, but we play clips from key opinion leader lectures and use animation to help drive the point home. This is primarily targeted to medical students and residents:
 - [Umbilical Pathologies](#)
 - [Inguinal Hernias](#)
- **Narrative Lecture, Grand Rounds & Live Event Talk Summaries** - brief lecture synopsis stories told by a narrator. We take our long lectures, identify the key points, take a clip from the lecture, and have a script for a narrator that summarizes the lecture. These are usually 7 to 12 minutes long.
 - [Ponsky PEG](#)
 - [Anal Pathology](#)
 - [TEG Rewind](#)
- **Long Form Podcasts** - cover all of the information that would be in a complete book chapter on a given medical topic that is in the form of audio with a narrator or moderator taking an expert through clinical scenarios. It starts off basic and gets more complicated as it encompasses all the elements of a single book chapter. This allows residents and even advanced surgeons to learn an entirely new topic while driving.
 - [Case-Based Journal Review: Intussusception in 2022](#)
 - [Colorectal Quiz Episode 30: Tethered Cord](#)
 - [Intestinal Rehabilitation, Episode 3: Enteral Autonomy, Part 2](#)
 - [Intestinal Failure with Dr. Brad Warner](#)

Journal Articles
